

The Rugged Parts Washer – Featuring EASY SOLVENT CHANGES & GOOD LIGHTING

Rugged Construction

Our parts wash tank is built from heavy gauge steel and bent for maximum strength. Sturdy stable legs prevent tank from tipping if parts are not centered.

Powder Coat Finish

Doused with a heavy coating of powder coat to protect your investment. You are sure to have a good-looking parts washer for years to come.

Parts Drip Tray

Built from heavy gauge steel with perforated bottom to allow drip drying of heavy parts.

Auto Off Timer

Our parts washer features a timed switch. So, if you're in a rush and forget to turn it off. No Worries! It'll shut itself off. Timer length is adjustable.

Bright LED Lighting

One thing we like is LOTS of light. A bright workspace is much easier to work in than a dark one in our opinion. So, we brought high levels of lumens to the parts washer.

Easily Change Solvent

Changing the solvent in the parts wash tank used to be a dreadful experience, not now with Supersauls parts washer. Any standard pail with a removable lid will work with our parts washer.

Supersaul 3 - The Gentle For User Solvent

Supersaul 3 is a no odor and pleasure to use solvent. It's proven to be very user friendly for over 25 years. A added bonus, Supersaul 3 does not need special solvent disposal and can be put in with your used oil collection.
